

Black Sun sports reading glasses

What is the usecase of the different glasses?

Brown: for bright summer days very pleasant brown tint. The brown glasses have a gradient of colour / tinting gradient. This means that the glasses have a weaker tint towards the bottom. Navigation devices and bike computers etc. are easier to read.

Yellow: contrast-enhancing for bad / hazy or foggy weather provides for good mood because better weather "pretends" green hues (meadows, trees) are slightly strengthened and appear "richer"

Clear: only protection of the eyes against wind, UV-light and insects
