

Black Sun sports reading glasses

Are the lenses of the reading glasses also corrected above the reading zone?

No, they're pure sports reading glasses. The lenses have no correction above the reading zones (neutral). These are pure bifocal glasses and not varifocals. Many customers have the problem of not being able to read the navigation device but do not need a major correction into the distance (negative dioptries). Here the Eagle Five is perfectly suitable. If you also need a larger correction for the distance, only a custom-made glasses can be used.
