

Black Sun sports reading glasses

Why are the temples of the Eagle Five extendable?

In the top view you can see that the temples of the Eagle Five "cling" behind the head and thus ensure an optimal and stable fit of the glasses. Since the depth of each head is different, the length of the temples can be adjusted. The picture also shows that the lenses of the glasses are strongly curved. It therefore surrounds the head and provides optimum protection against wind, dirt and insects.
