

macrohigh free

The recording of the urban/macro (not Urban free!) stops automatically after 9:59:59 hrs

The recording will stop after 9:59:59 hrs automatically to avoid that the recording goes on endless as user unfortunately forget to stop. But the recording time line can be extended by using the timer mode (under STP mode in the setting). Please just set the timer on auto time. As one recording can use 19 laps between 1 minute and 9:59 hrs the recorded time can be maximum almost 190 hrs!
