## What is Pairing?

Pairing is the connecting of sensors, e.g. your heart rate monitor with the **ANT+device**. After you have paired the first time, your device automatically recognizes the paired sensor each time it is activated. This process occurs automatically when you start your device and only takes a few seconds when the sensors are activated and begin functioning correctly. Once paired, your device exclusively receives data from your own sensors, and you can go close to other sensors without interference.

Move away (40 m) from other sensors while the device is trying to pair with your sensor for the first time. Bring your sensor within range (3 m) of the device.
